

Understanding Your Hearing Conservation Hearing Check

The DD2216

The Purpose of a DD2216 is to record annual and follow-up hearing thresholds for individuals routinely hazardous exposed noise. Before this form is used a reference audiogram must already be filed in the individual's health record. A DD2216 is also used to record 90-Day, termination of other audiograms.

Who Gets a 2216?
All noise exposed and/or ototoxically (drugs or chemicals that are toxic to the inner ear) exposed **active duty** and **DoD civilian personnel** receive a DD2216 audiogram annually. These individuals should also receive 90-Day (test performed 90 days after exposure to noise tests for susceptibility to noise exposure) and termination audiograms (performed at the termination of active duty or civil service employment).

58. EXAMINER SIGNATURE, PAY GRADE, MARITAL STATUS												59. LAST ELECTROACOUSTIC CALIBRATION DATE MM YY (MM DD YY)	

The difference between the current test and the reference test is used to determine if an STS has occurred. If there is an STS on the annual test follow-up testing is required..
